## Dramix ${ }^{\circledR}$

## Our recommendations, from handling to pumping

| Stacking | Safety |
| :--- | :--- |
| of units | precautions |

## Transport

- By truck: no stacking allowed
- By container: allowed with precautions*

## Warehouse storage

- Racks: no stacking allowed
- Floor: allowed with precautions*
* Precautions: obtain stability of the upper unit (e.g. put wooden plate in between)

| Handling |  |  |  |
| :---: | :---: | :---: | :---: |
| Before adding fibers |  | Maximum dosage depends on: <br> - Concrete composition <br> - Placing method <br> - Type of application | Bekaert recommendations: <br> - Preferably use a central batching plant mixer <br> - A continuous grading and sieve curve <br> - Sufficient fines and mortar content |
|  |  | Note: <br> - Depending on dosage and fiber type, fibers reduce the slump <br> - Adjust required consistency preferably with mid-range or high-range water reducers <br> - If you plan to work with glued fibers, stored in < $42^{\circ} \mathrm{F}$, in combination with automatic dosing systems, please contact our organization beforehand. |  |
| Dosing | Plant mixers | - Introduce fibers together with sand and aggregates, OR: Add fibers to fresh mixed concrete <br> - Never add fibers as a first component |  |
|  | Truck mixers | - Add fibers continuously at a ma <br> - Never add fibers as a first comp <br> - Never fill drum completely with | of $90 \mathrm{lb} / \mathrm{min}$ <br> te in order to achieve even fiber distribution |
| Mixing | Plant mixers | No special mixing requirements in terms of speed or time of mixing. |  |
|  | Truck mixers | - Run maximum drum rotation during the addition of fibers. <br> - After addition of fibers, continue mixing the concrete for $45 \mathrm{sec} / \mathrm{yd}^{3}$ with a minimum of 5 minutes. |  |

Quality control | - Workability |  |
| :--- | :--- |
|  | - Air content |
|  | - Separation of fiber bundles when using glued fibers |
|  | - Homogenious fiber distribution in the concrete |

Before using fiber concrete, a preliminary test must be done

## Pumping

Hose diameter > 3.5 in.
Place the shute min. 14 in . above the concrete pump hopper grill.
For complicated pump lines or concrete compositions, a trial is recommended prior to execution
