

## Bekaert - SAP eNews

### Time to take your career to an international level – what about working in the Bekaert SAP Competence Center?

Dear SAP professional,

You might know us for example as a supplier of steel cord products for tire reinforcement – one in every four tires in the world runs on Bekaert steel cord. Or maybe you know our Dramix® steel fibers, used to reinforce over five million cubic meters of concrete every year. We also offer significant added value for various businesses in all kinds of markets, from automotive to construction and from utilities to the heavy equipment sector.

**But did you know that Bekaert also offers splendid opportunities to take your career as SAP professional to an international level?**

SAP plays a key role in our business processes. The Bekaert SAP Competence Center assists the global Bekaert organization with the SAP roll out and provides the necessary support for our core business processes. Within Bekaert, the SAP Competence Center is part of the Group IT Department and is located in our headquarters in Belgium. It maintains a strong link with the Bekaert regional SAP teams in China, Central & Eastern Europe and the Americas.

To continuously support the growth of our global businesses, we want to further strengthen the international team within our Group SAP Competence Center with several SAP professionals.
