Gasoline Particulate Filter
for DI gasoline passenger cars

What can we offer you?
Bekaert Gasoline Particulate Filter is a highly porous 3 dimensional structure of metal fibers.

Filter tunability makes tailormade performance possibilities
Thanks to the in house development of Bekipor® metal fiber media we can tune the filter efficiency due to its unique structure of very fine metal fibers (Ø of 17-22-30 µm). Pressure drop over the filter can be optimized by different porosities (up to 98%) The use of special alloy for the filter media results in corrosion and temperature (up to 1000°C) resistance.

Meeting EURO VI soot requirements at very low ΔP

1. Our expertise, your success
Bekaert has over 30 years of experience in designing and producing fiber media and is one of the largest producers of sintered webs in the world.

2. Over 600 engineers to meet your demands
Our technology centers count over 600 international engineers and researchers who listen to your demands and have the ability to create any sort of metal based media. In order to guarantee the quality of our research Bekaert has an in-house engineering department where we develop our own machinery and process equipment.

3. Fast delivery
Bekaert provides products and services in more than 120 countries. Our global presence enables us to offer customers products of consistent quality and timely deliveries wherever they are located.
Results reference tests

- Maximum pressure drop across GPF during NEDC cycle: > 15 mbar
- Average filtration efficiency GFP during NEDC cycle: + 80%
- Fully meeting EURO VI legislation
- Passive regeneration possible during 1 NEDC cycle
- High temperature vibration tests OK

A local service supported by global presence

Benefit from our commitment to local service by relying on our worldwide network of sales offices, research centers and plants to meet your needs quickly and effectively.
