Murfor® GER FOR MASONRY WITH MORTAR JOINTS

What is Murfor® GER?

Murfor® GER is the masonry reinforcement solution from industry specialist Bekaert that will allow you to perform your masonry works in full confidence. Murfor® GER is a prefabricated bed joint reinforcement consisting of two parallel wires welded together with a continuous truss wire. Complying with today's toughest industry standards, Murfor® GER significantly increases the strength of your masonry and the integrity of your construction.

Why use Murfor® GER?

Combining its excellent performance with cost-effectiveness, Murfor® GER offers you and your construction projects:

- new architectural possibilities
- structural performance
- crack control

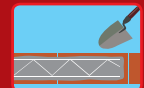

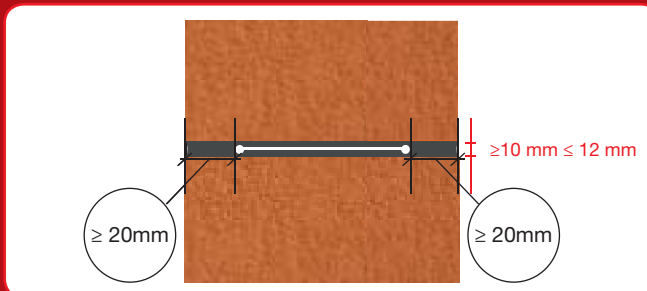

Having a minimal thickness, Murfor® GER can easily be positioned in the joints. Thanks to the geometry and the well-chosen length of Murfor® GER elements, use on the construction site has been made easy.

Bekaert will advise on the most suitable Murfor® type for your application.

POSITION OF Murfor® GER IN THE MORTAR JOINTS

GEOMETRY

Width (mm)	Diameter (mm)	Diameter (mm)
50	5	3,75
100	5	3,75
150	5	3,75
180	5	3,75

COATING

AISI 302

- GER/S (AISI 302)
• For masonry exposed to dampness or an aggressive environment

Zn Fe

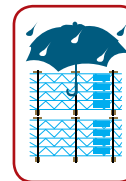

- GER/Z (Zn)
• For masonry exposed to a dry environment

PACKAGING

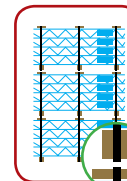

25 pieces per bundle (75 m)
40 bundles per pallet (3050 m)

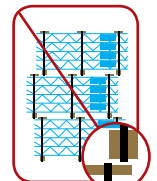

STORAGE

KEEP DRY

RIGHT

WRONG

APPROVALS

ISO

CE

KOMO

ATG

- **CE LABEL:** Murfor® is CE marked according to EN 845-3: masonry bed joint reinforcement. For detailed info: "EC declaration of conformity" available on request.

- **OTHER APPROVALS:** Bekaert is close to the market. Bekaert seeks conformance to every necessary, national product quality standard, in case one or more requirements are not covered in the CE or ISO 9001 certifications. Other Murfor® approvals are Zulassung DIBt, Mursenter and ITB.
