

Why choose Bekaert?

The wire drawing and coating specialist

Bekaert has the flexibility, historical background, and technical skills to create any steel wire no matter what shape, composition or mechanical characteristic. To guarantee the quality of our wire, Bekaert only uses the best wire rod for your products. For this, we rely on a global network of top suppliers. Bekaert's global distribution platform enables us to keep stock of the most standard grades, so we are ready when you need us.

Your strategic partner

Our global experience means that your products are manufactured to strict international standards of safety and quality. Our local presence means that we are at your service at all times. In the event of a question or concern, a trained professional will answer your call as soon as possible.

Whatever your application, we will work closely with you. Together, we will create a lasting solution that answers your needs.

PET coated wire for brassieres

A high-quality wire that delivers superior comfort and support

What can we offer you?

Our range of high-quality, corrosion-resistant, pre-coated (Zn + PET) wire comes in a variety of shapes that can offer comfort and support. In addition to our standard range of PET coated wire, our product range also includes bra wire with a specialized, non-squeaking PET coating (available in all dimensions). The coating prevents any potentially disturbing, squeaking noises.

Benefits

- Excellent corrosion protection - no post-coating required
- Homogenous formability of the wire
- Soft, smooth aesthetic surface
- Easy and fast bra manufacturing process
- Elimination of disturbing noises with our available non-squeaking coating

Excellent corrosion protection

Our brassiere wire has two effective guards against corrosion: PET and zinc. The PET coating is an outstanding water and moisture barrier and is perfectly adhered to the wire; this also prevents the coating from breaking or flaking. The zinc coating on the core wire provides additional corrosion protection. These characteristics combined make our brassiere wire more durable and eliminate the need for post-coating operations.

Shapes that support

All of our pre-coated wire provides excellent formability, elasticity and strength; it has the ability to adapt to different forms and the needed strength to preserve its original shape. Additionally, our bra wire comes in a variety of core wire shapes that deliver an enhanced, supportive experience for your customers.

Flat shaped core wire	Offers the standard benefits of PET	
Oval shaped core wire	For well-balanced support and comfort	
C-shaped core wire	For a supreme fit with additional support and comfort	

Combining the excellent properties of our PET coated wire with our variety of wire shapes offers you a solution that will fit your production needs and fulfill your customers' expectations.

Bekaert (www.bekaert.com) is a world market and technology leader in steel wire transformation and coatings.

Bekaert (Euronext Brussels: BEKB) was established in 1880 and is a global company headquartered in Belgium, employing more than 25 000 people worldwide. Serving customers in 120 countries, Bekaert pursues sustainable profitable growth in all its activities.

Easy to process

The cushiony, soft PET coating and slightly rounded edges of the wire make easy insertion into the bra wire channel possible, enhancing the overall manufacturing process. The smooth coating also prevents the wire from coming through the fabric and enables the bra to maintain its original form for a longer period.

Short lead times

As a market leader in the development and manufacturing of wire for brassieres, we have production and distribution facilities spread over the world. Our delivery times can meet your production schedule.

Product range

Flat: 2.00 mm x 0.72 ~ 3.22 x 0.74 mm

Oval: 2.00 mm x 1.00 mm ~ 2.95 mm x 1.75 mm

C-shaped: 2.40 mm x 0.90 mm x 0.80 mm ~ 2.95 mm x 1.25 mm x 1.05 mm

Packaging details

3 x G240/70 Spools on pallets (92 x 77 cm)

Other dimensions available on request.
